Regulation to Readiness (R2R)

- **Transforming Digital Transformation to the next level: A transformative technical solution to improve delivery of information from regulation to implementation**
- **AI-driven solution to simplify Regulations to meet various Stakeholders needs. R2R helps how information is consumed once legislation is passed – consumed, managed and distributed by various stakeholders**
- **Comprehensive Solution to ingest policies, train stakeholders, provide communication, analyze data and generate reports**
- **Ensures consistency and compliance across all stakeholders. Rather than having different interpretations of same information circulating, everyone receives consistent and approved language.**
- **Pull instead of Push: Information is pulled by stakeholders on-demand in a way easily consumable by specific user**
- **Preferred way to receive information: Language, platform or form**

Regulation to Readiness (R2R)

- **Accelerates Operational Readiness.** Instead of the traditional timeline that can take weeks or months to move from policy release to training deployment, R2R accomplishes the same process in just hours. This means organizations can respond to changes almost immediately rather than experiencing delays that affect service delivery.
- **Reduce administrative burden on manual efforts** (by manually updating documents and materials, subject matter experts at an agency can focus on their highest-value activities - interpretation and oversight. This allows organizations to leverage their expertise more strategically while automating routine tasks.
- **Enhances the experience for users through improved understanding and communication.** By automatically converting complex policy language into plain language, accessible updates, the system ensures that everyone can understand and act on important information, regardless of their technical background or expertise level. R2R provides targeted training/education to consumers to their preference and pace.
